

The screenshot shows the Fast2SMS website. The left sidebar contains a navigation menu with links: Overview, OTP SMS API, DLT SMS API, Quick SMS API, Bulk SMS (Service) API, DLT SMS (Manual) API, Wallet Balance API, and Error Codes. The main content area is titled 'Overview' and describes the service as a gateway API for sending DLT-approved SMS. It lists supported languages: PHP, JAVA, C#, C, Python, Ruby, JavaScript, and NodeJS. Below the overview, there is an 'Authorization Key' section explaining that an API key is required for all requests. It provides instructions on how to get a free API key from the developer API section and shows the required GET and POST requests. A note states that the API key must be replaced with the user's own key. The bottom section is titled 'OTP SMS API' and mentions that it can be used for sending OTP SMS without DLT approval. The right sidebar shows a code editor with a dark theme, displaying the supported languages.
